Mário João Azevedo da Silva, 35 years old, graduated as a Graphic Designer from FLAG after entering the Multimedia Technician double certification course and 12th year equivalence at IEFP in Setúbal after more than ten years as a counter employee.

Dynamic, flexible and committed whenever I have an interesting project to be developed.

I have always been interested in areas such as drawing, digital image processing, music, and photography, all this as self-taught and autonomous learning, since I am always chasing new things to learn whenever possible.

Ambitious, in a professional sense, I hope to be able to create projects that may benefit society and the planet aswell.
