

2024 – 2025 · Flag ·
Flagprofessional Fullstack Web
Development (363h)

Hello, my name is Mario

and I move quite comfortably across the fields of Graphic Design, UX/UI Design and Front-End Development, crafting solutions that blend aesthetics with function; I believe in delivering visual clarity and usability.

I began working as a counter employee at a café after leaving school at 18 without completing my studies.

In 2019, I made the decision to return to education and pursue my passions. Since then, I've completed multiple technical and creative courses — including Multimedia, Graphic Design, UX/UI Design, and currently, a Fullstack Developer program set to finish by the end of this year.

This path has taught me resilience, adaptability, and a deep motivation to keep evolving.

In 2019, I made the decision to return to education and pursue my passions. Since then, I've completed multiple technical and creative courses — including Multimedia, Graphic Design, UX/UI Design, and currently, a Fullstack Developer program set to finish by the end of this year.

This path has taught me resilience, adaptability, and a deep motivation to keep evolving.

My process usually begins by understanding the core idea or challenge of a project.

From there, I break it down into key stages: research, structure, design, content, development, and testing.

To stay focused and flexible, I organize and prioritize tasks using a hybrid approach — combining Scrum principles with the Eisenhower Matrix.

I work in tight feedback loops, regularly presenting progress to clients or stakeholders to ensure alignment throughout. Each round informs the next — whether that means refining wireframes, adjusting layouts, or rethinking functionality.

This loop continues until we reach a polished, functional result — or until the deadline calls for delivery.

Create a logo from scratch for a fictional company, demonstrating the skills and knowledge acquired throughout the modules related to graphic design and vector illustration.

A fictional company related to the retro-gaming industry was proposed, featuring an experimental graphic approach.

After researching the concept, I realized this is an area that has been widely explored in recent years. What started as a simple platform for buying and selling retro video games evolved into a complex business with multiple approaches to the theme. Studies on shape and color were conducted with clear reasoning, and the concepts were applied in a brand guidelines manual.

Today, I would take a slightly different approach, applying a glitch effect to the isotype while keeping the lettering intact. Not bad for someone who was studying and working, sleeping only 3 hours a day, and handling several academic projects simultaneously.

IEFP Setubal

<https://www.iefp.pt/>

The IEPF is the national public employment service. Its mission is to promote job creation and quality employment while combating unemployment, through the implementation of active employment policies, including professional training programs., Pothos would be a physical and online store dedicated to sell classic video games. It also includes a retro console repairs and organizes vintage gaming events and tournaments.

Course: EFA Multimedia Technician
